**Wrap Around:**
NQ.Q #1: Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.
NQ.Q #2: Define appropriate quantities for the purpose of descriptive modeling.
NQ.Q #3: Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.

**Process Standards:**
1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.
both decimal and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities. Interpret scientific notation that has been generated by technology.

NQ.RN #1: Explain how the definition of the meaning of rational exponents follows from extending the properties of integer exponents to those values, allowing for a notation for radicals in terms of rational exponents.

NQ.RN #2: Rewrite expressions involving radicals and rational exponents using the properties of exponents.

---

UNIT 2 ~ EXPRESSIONS
(Hypatia)

MP #3: Reason abstractly and quantitatively.

A.SSE #1: Interpret expressions that represent a quantity in terms of its context.
  a. Interpret parts of an expression, such as terms, factors, and coefficients.

---

UNIT 6 ~ LINEAR FUNCTIONS

F.IF #1: Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If \( f \) is a function and \( x \) is an element of its domain, then \( f(x) \) denotes the output of \( f \) corresponding to the input \( x \). The graph of \( f \) is the graph of the equation \( y = f(x) \).

F.IF #2: Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.

F.IF #3: Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers.

F.IF #4: For a function that models a relationship between two quantities, interpret key features of graphs and

---

UNIT 10 ~ LINEAR SYSTEMS

A.REI #5: Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.

A.REI #6: Solve systems of linear

EE #2: Use square root and cube root symbols to represent solutions to equations of the form \( x^2 = p \) and \( x^3 = p \), where \( p \) is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect cubes. Know that \( \sqrt{2} \) is irrational.

G #6: Explain a proof of the Pythagorean Theorem and its converse.

G #7: Apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensions.

G #8: Apply the Pythagorean Theorem to find the distance between two points in a coordinate system.

TRANSFORMATIONS

G #1: Verify experimentally the properties of rotations, reflections, and translations:
  a. Lines are taken to lines, and line segments to line segments of the same length.
### Process Standards:
1. Make sense of problems and persevere in solving them.
2. Reason abstractly and quantitatively.
3. Construct viable arguments and critique the reasoning of others.
4. Model with mathematics.
5. Use appropriate tools strategically.
6. Attend to precision.
7. Look for and make use of structure.
8. Look for and express regularity in repeated reasoning.

1st Nine Weeks
the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.

A.CE #1: Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and quadratic functions, and simple rational and exponential functions.

A.CE #4: Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations.

UNIT 4 ~ REAL NUMBER SYSTEM (Article)

NQ.RN #3: Explain why the sum or product of two rational numbers is rational; that the sum of a rational number and an irrational number is irrational; and that the product of a nonzero rational number and an irrational number is irrational.

2nd Nine Weeks
symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.
b. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.

F.IF #8: Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.
b. Use the properties of exponents to interpret expressions for exponential functions.

F.LE #1: Distinguish between situations that can be modeled with linear functions and with exponential functions.
c. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another.

F.LE #3: Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing linearly,

3rd Nine Weeks
compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.

SP.ID #3: Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).

SP.ID #5: Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.

4th Nine Weeks
G #2: Understand that a two-dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent figures, describe a sequence that exhibits the congruence between them.

G #3: Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates.

SIMILARITY

G #4: Understand that a two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and dilations; given two similar two-dimensional figures, describe a sequence that exhibits the similarity between them.

LINE & ANGLE RELATIONSHIPS

EE #6: Use similar triangles to explain why the slope m is the same between any two distinct points on a non-

Process Standards:
1. Make sense of problems and persevere in solving them.
